

AES Mezzanine Deck VIP Platform

A build and technical overview

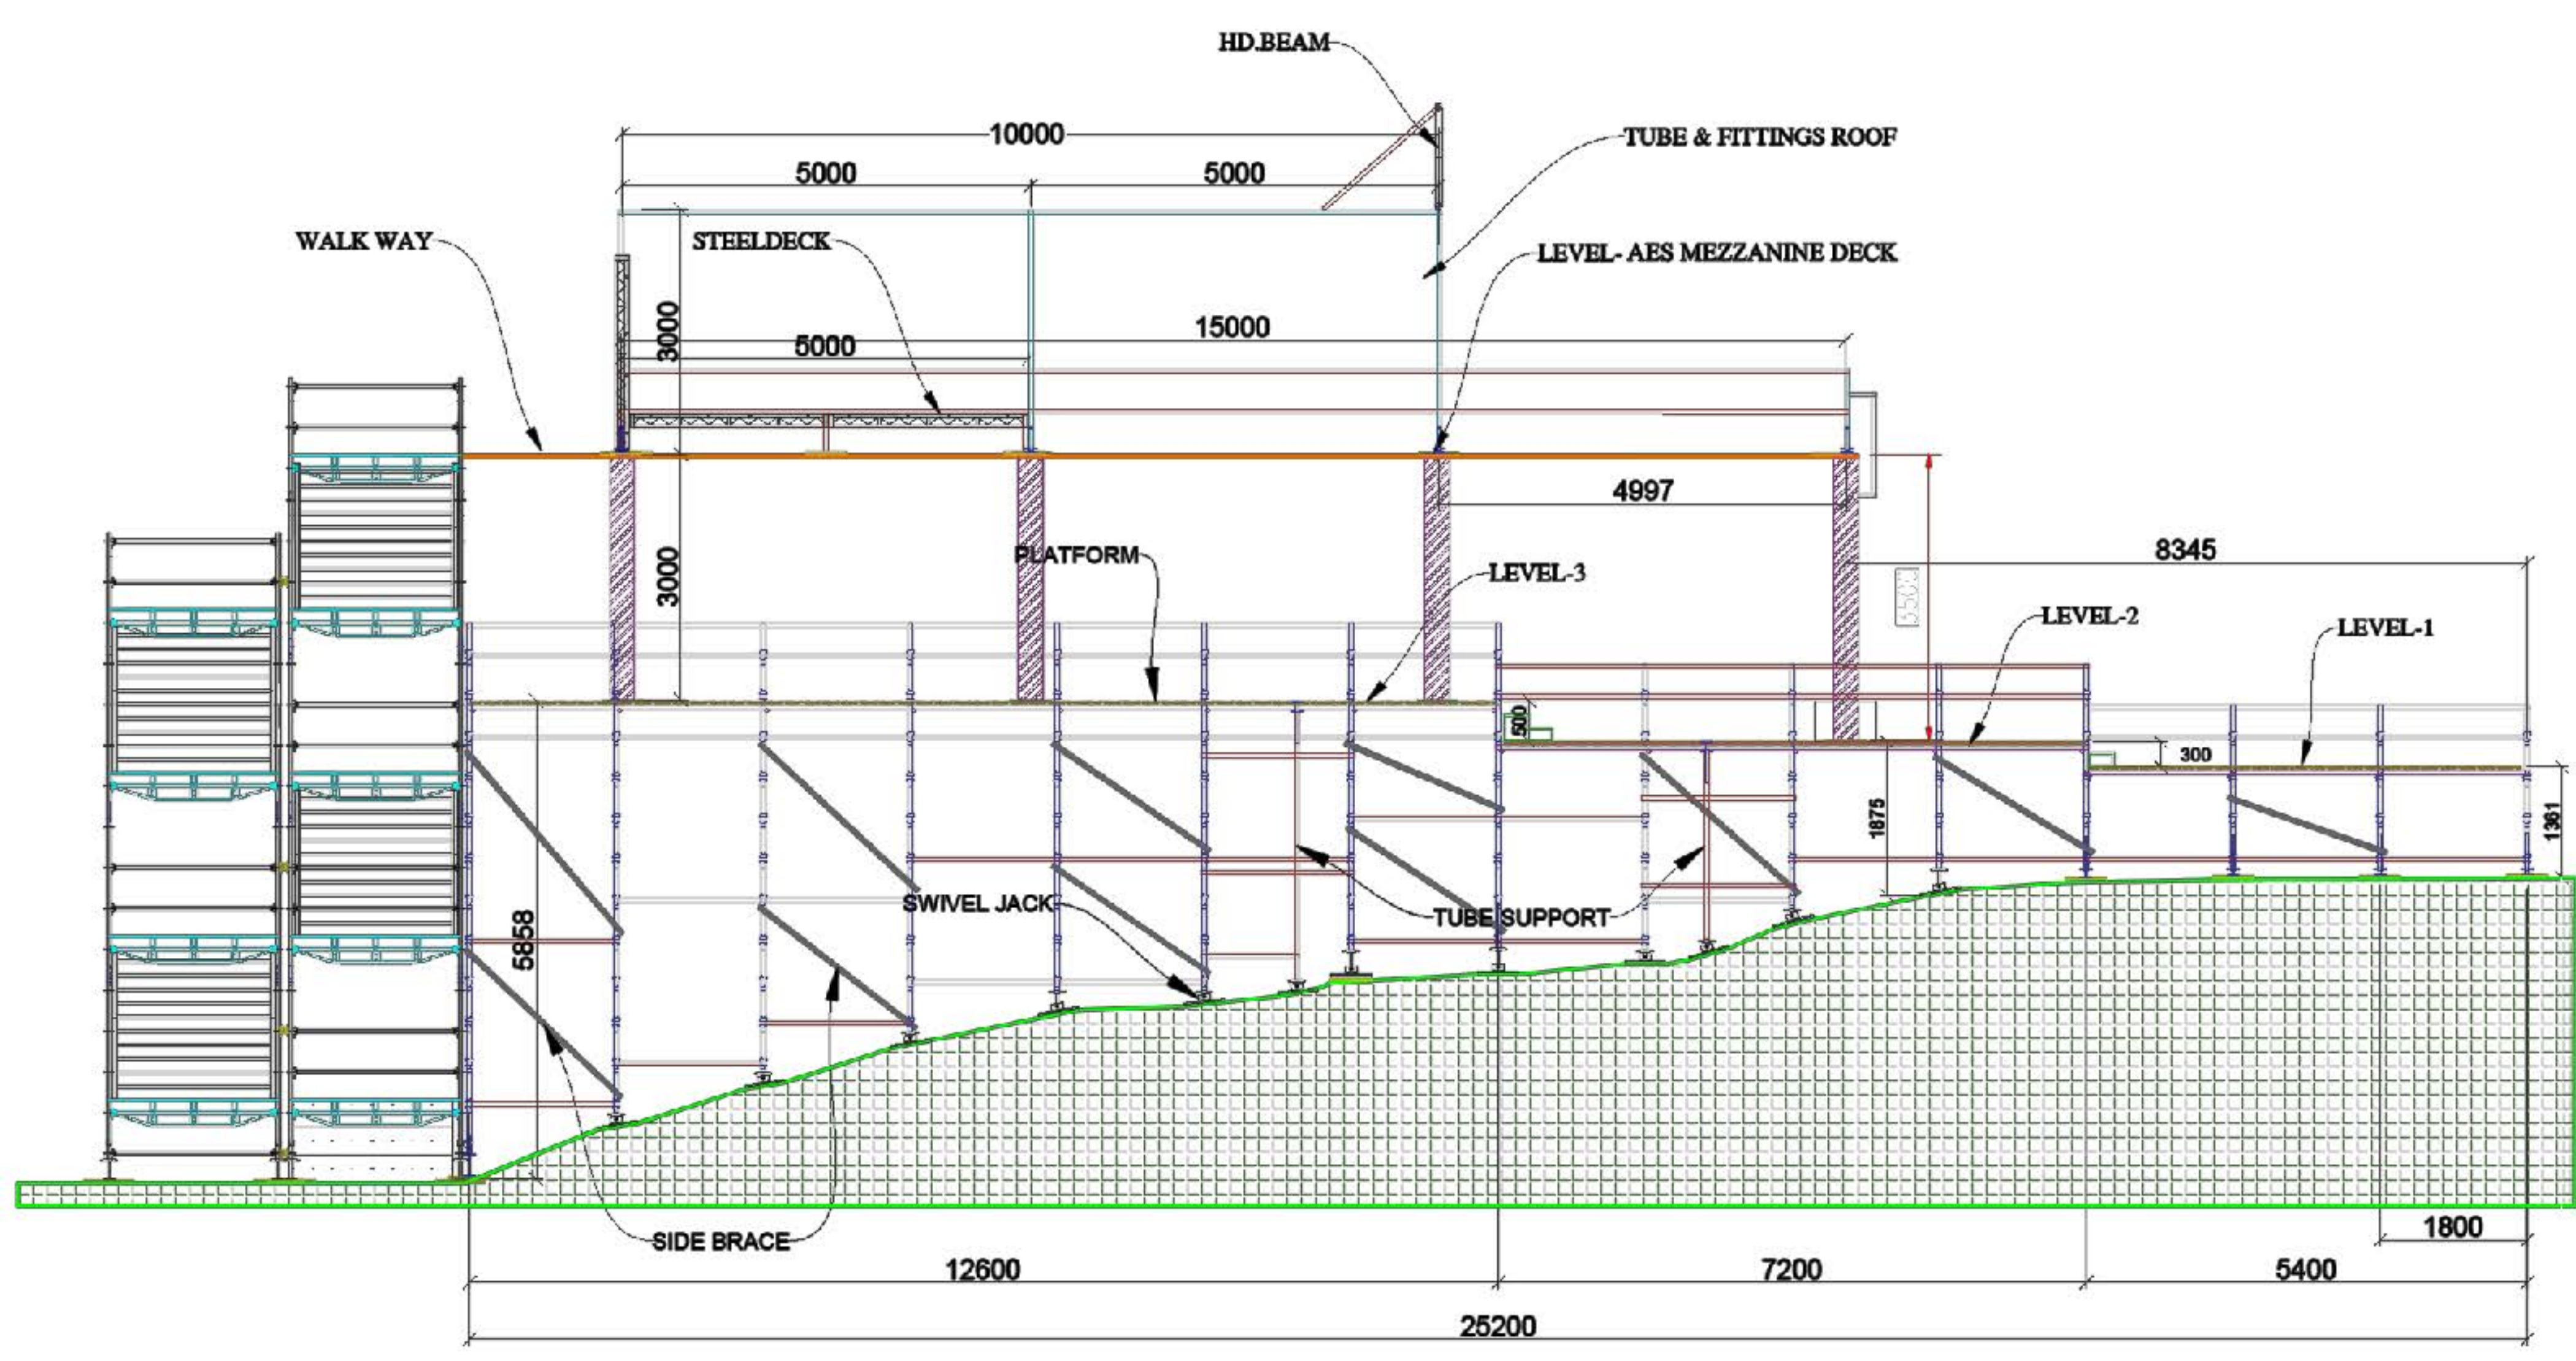

The AES Mezzanine Deck is a strong steel frame and floor modular system, which can be constructed to create a level platform and is often stacked, to create multi-level structures. This versatile product is the perfect solution for venues that want to maximise capacity in areas where space is limited.

The mezzanine steel frame is engineered to a 5m x 5m grid system, which allows the AES design team the ability to create a wide range of customizable structures for our clients. The 5m dimensions are ideal for building spaces that are practical to the event industry.

For example, installing partitions can divide the structure levels into individual rooms, such as corporate lounges and vip boxes. Back of house services can also be removed from view, with separate access and loading areas erected out of sight.

The AES Mezzanine Deck has the capability to offer the same usages as a permanent building but can be installed quickly, with no foundations or ground works required. Making it the ideal and cost effective solution for venues and event organisers.

The AES Mezzanine Deck is ideal solution for:

- VIP Platforms & Boxes
- Pavillions & Viewing Galleries
- Bespoke Modular Buildings
- Exhibitions & Showrooms
- Pop up Restaurants
- Service and Office facilities
