Strong & Safe

AES Barriers are proven to be the safest solution for large crowds.

AES Mojo/Bojo barriers

For quick set-up, the barriers are designed to connect to each other, providing a strong barricade. Once installed, the barrier is held in place by the audience standing on top of the floor-plate on the frontside of the section.

AES has barrier gates and a number of corner options; variable and fixed angles that offer various configurations. Ideal for golden circles and fan pits.

As part of the same range, AES has snake runner sections that enables crew to feed cables through. Allowing multi-cores and power cables to safely cross the barrier section after or during installation or removal (allowing for fast load outs).

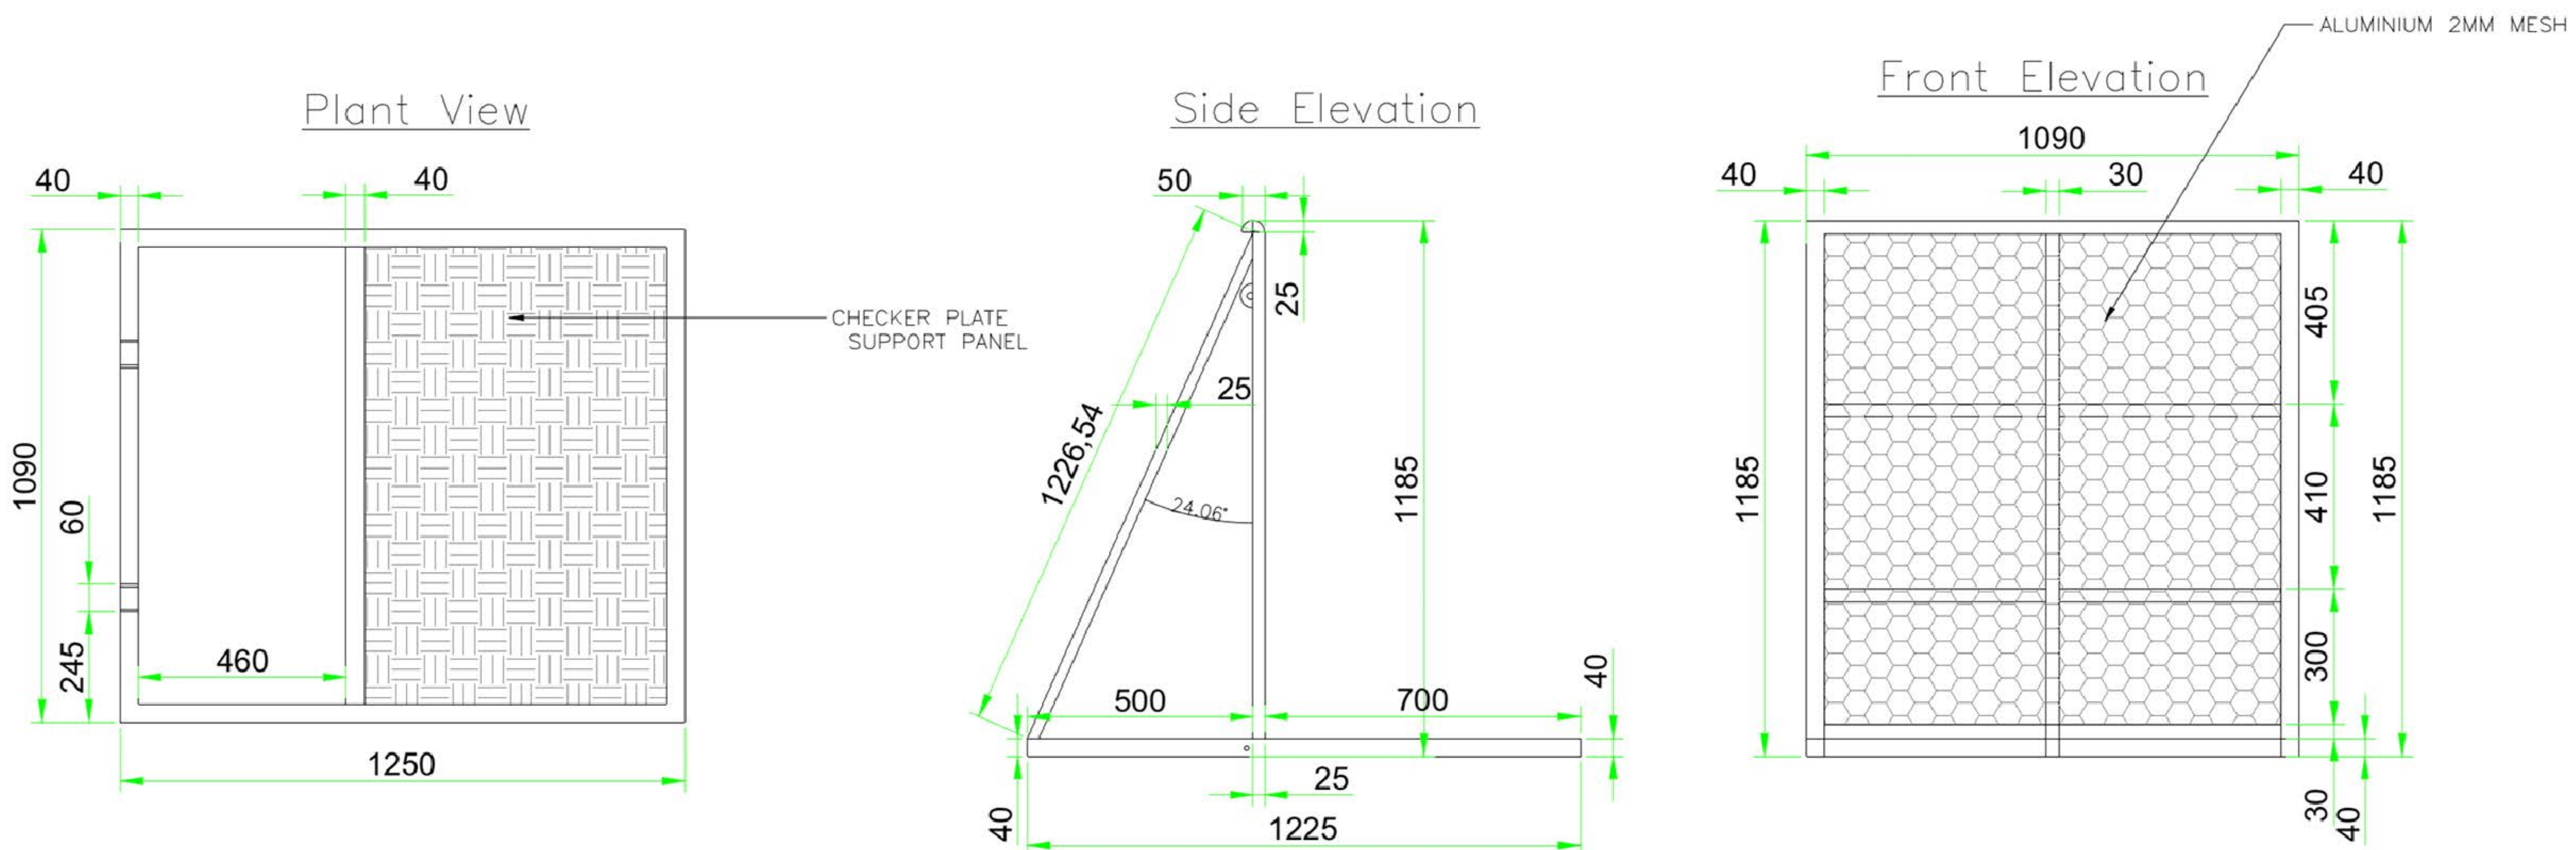

Effective crowd management is about preparation for what could happen; planning for what the audience or an artist may do unexpectedly. The barrier's design enables configurations for every client, taking into consideration a wide range of factors including type of occasion, musical genre, audience demographic, site layout and terrain and expected crowd size.

AES Mojo/Bojo Barrier Specifications

Dimensions:

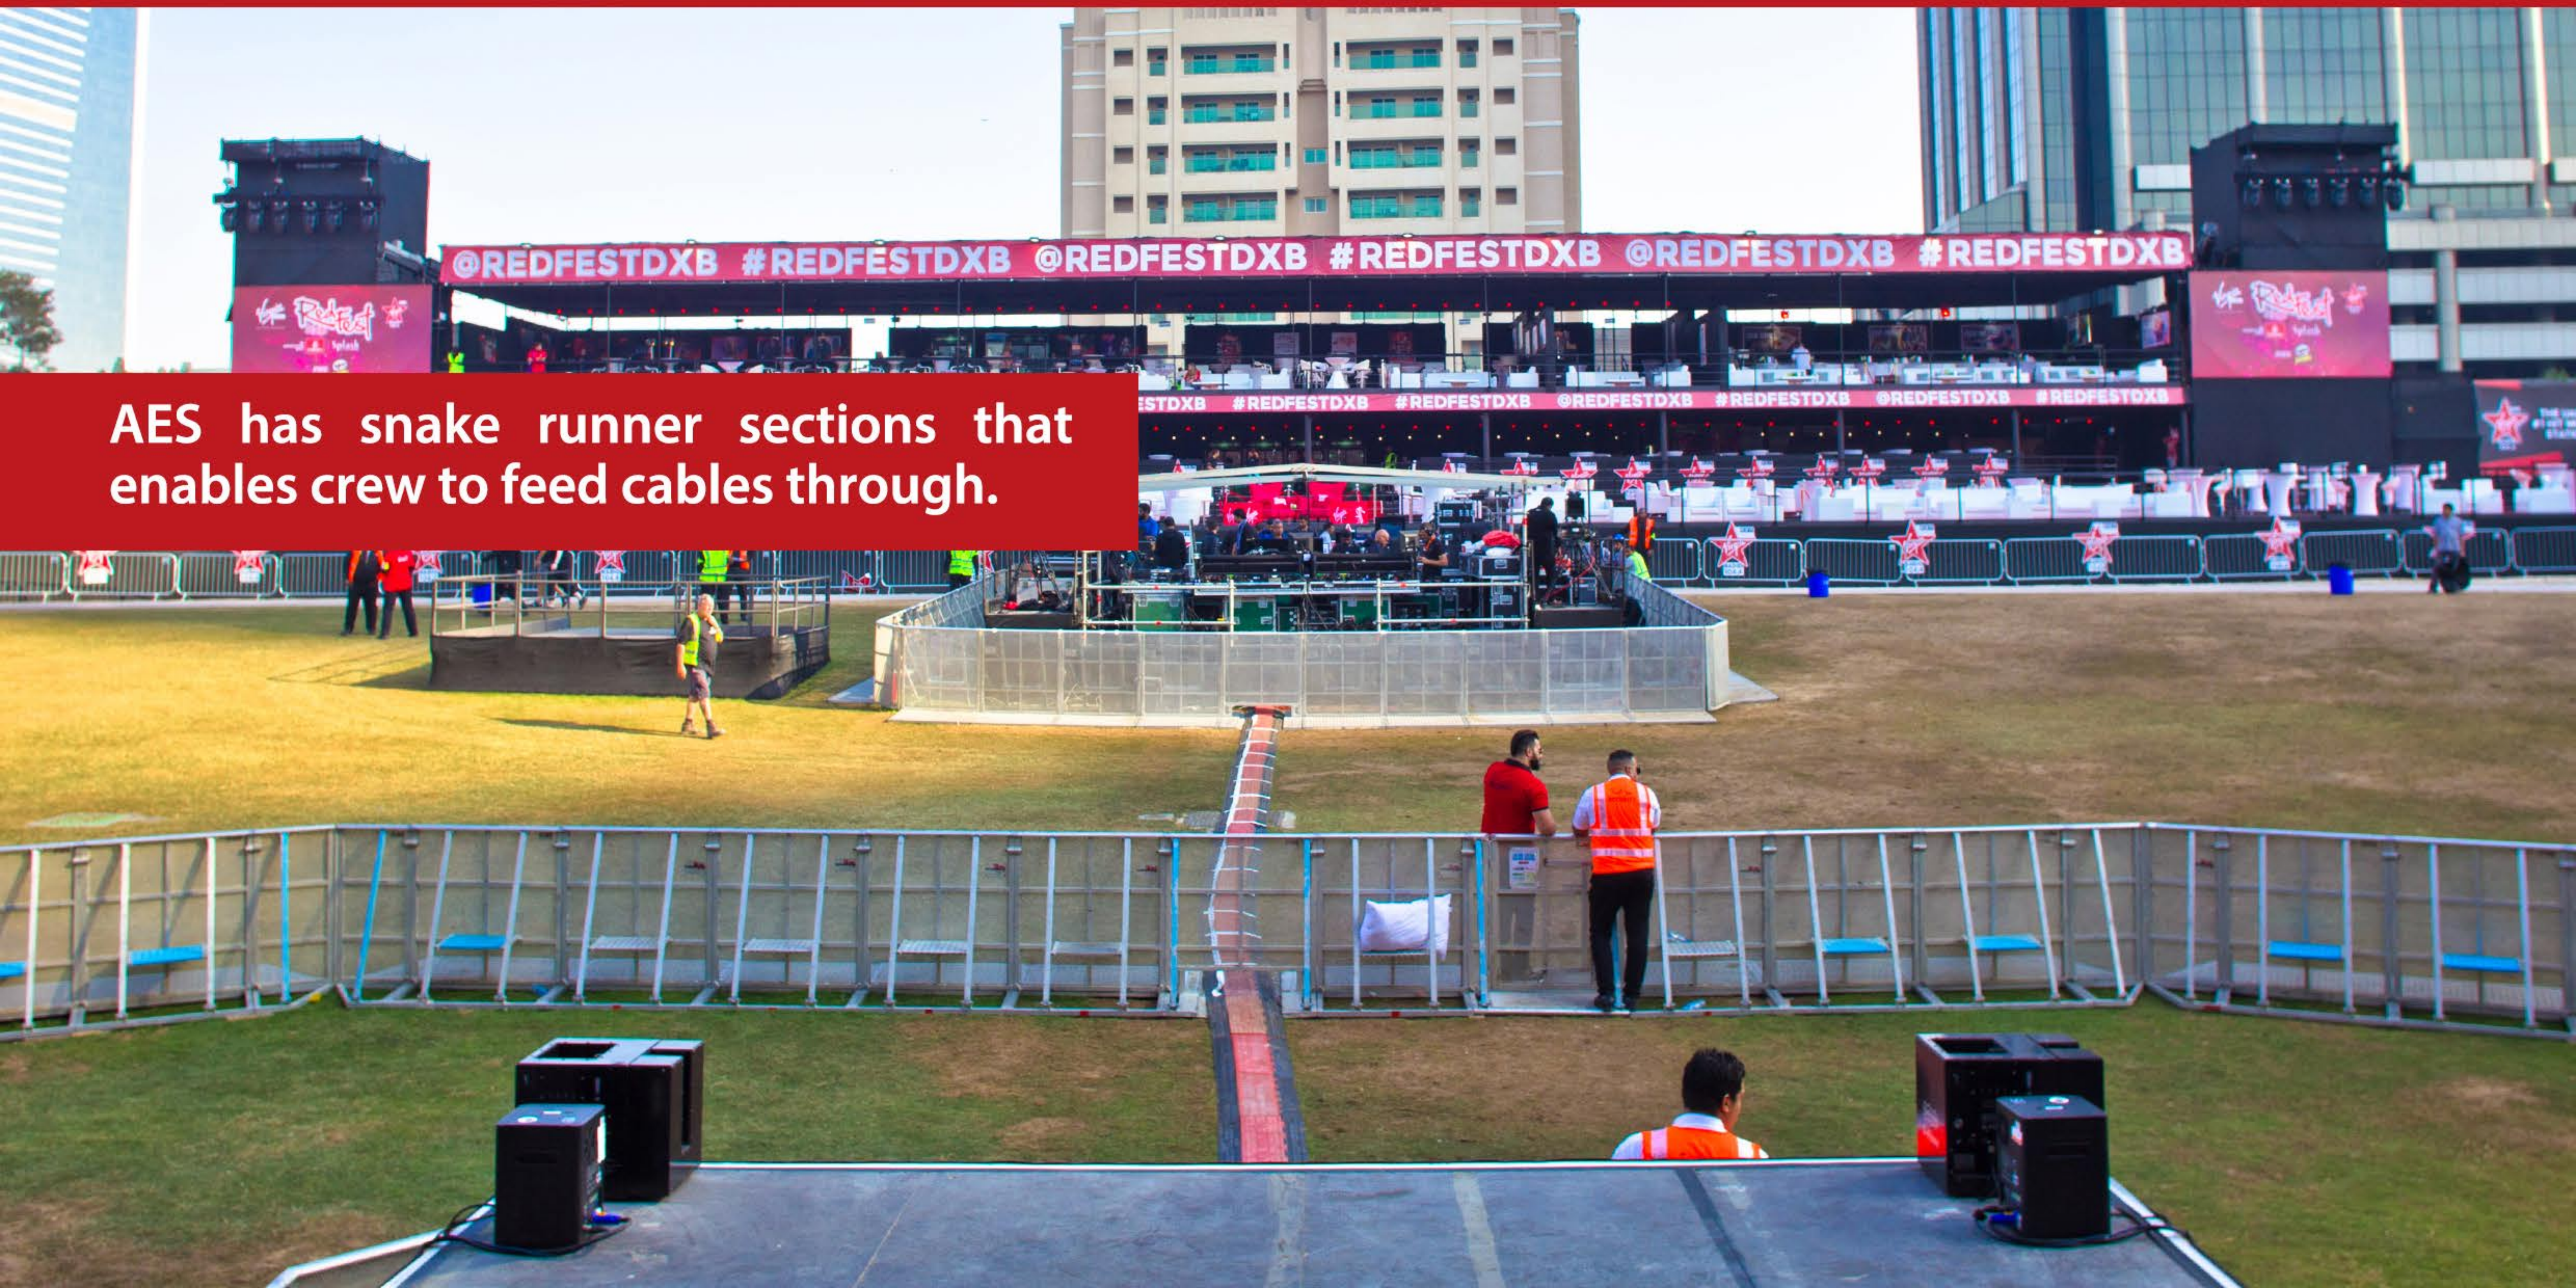

H: 1185mm

W: 1090mm

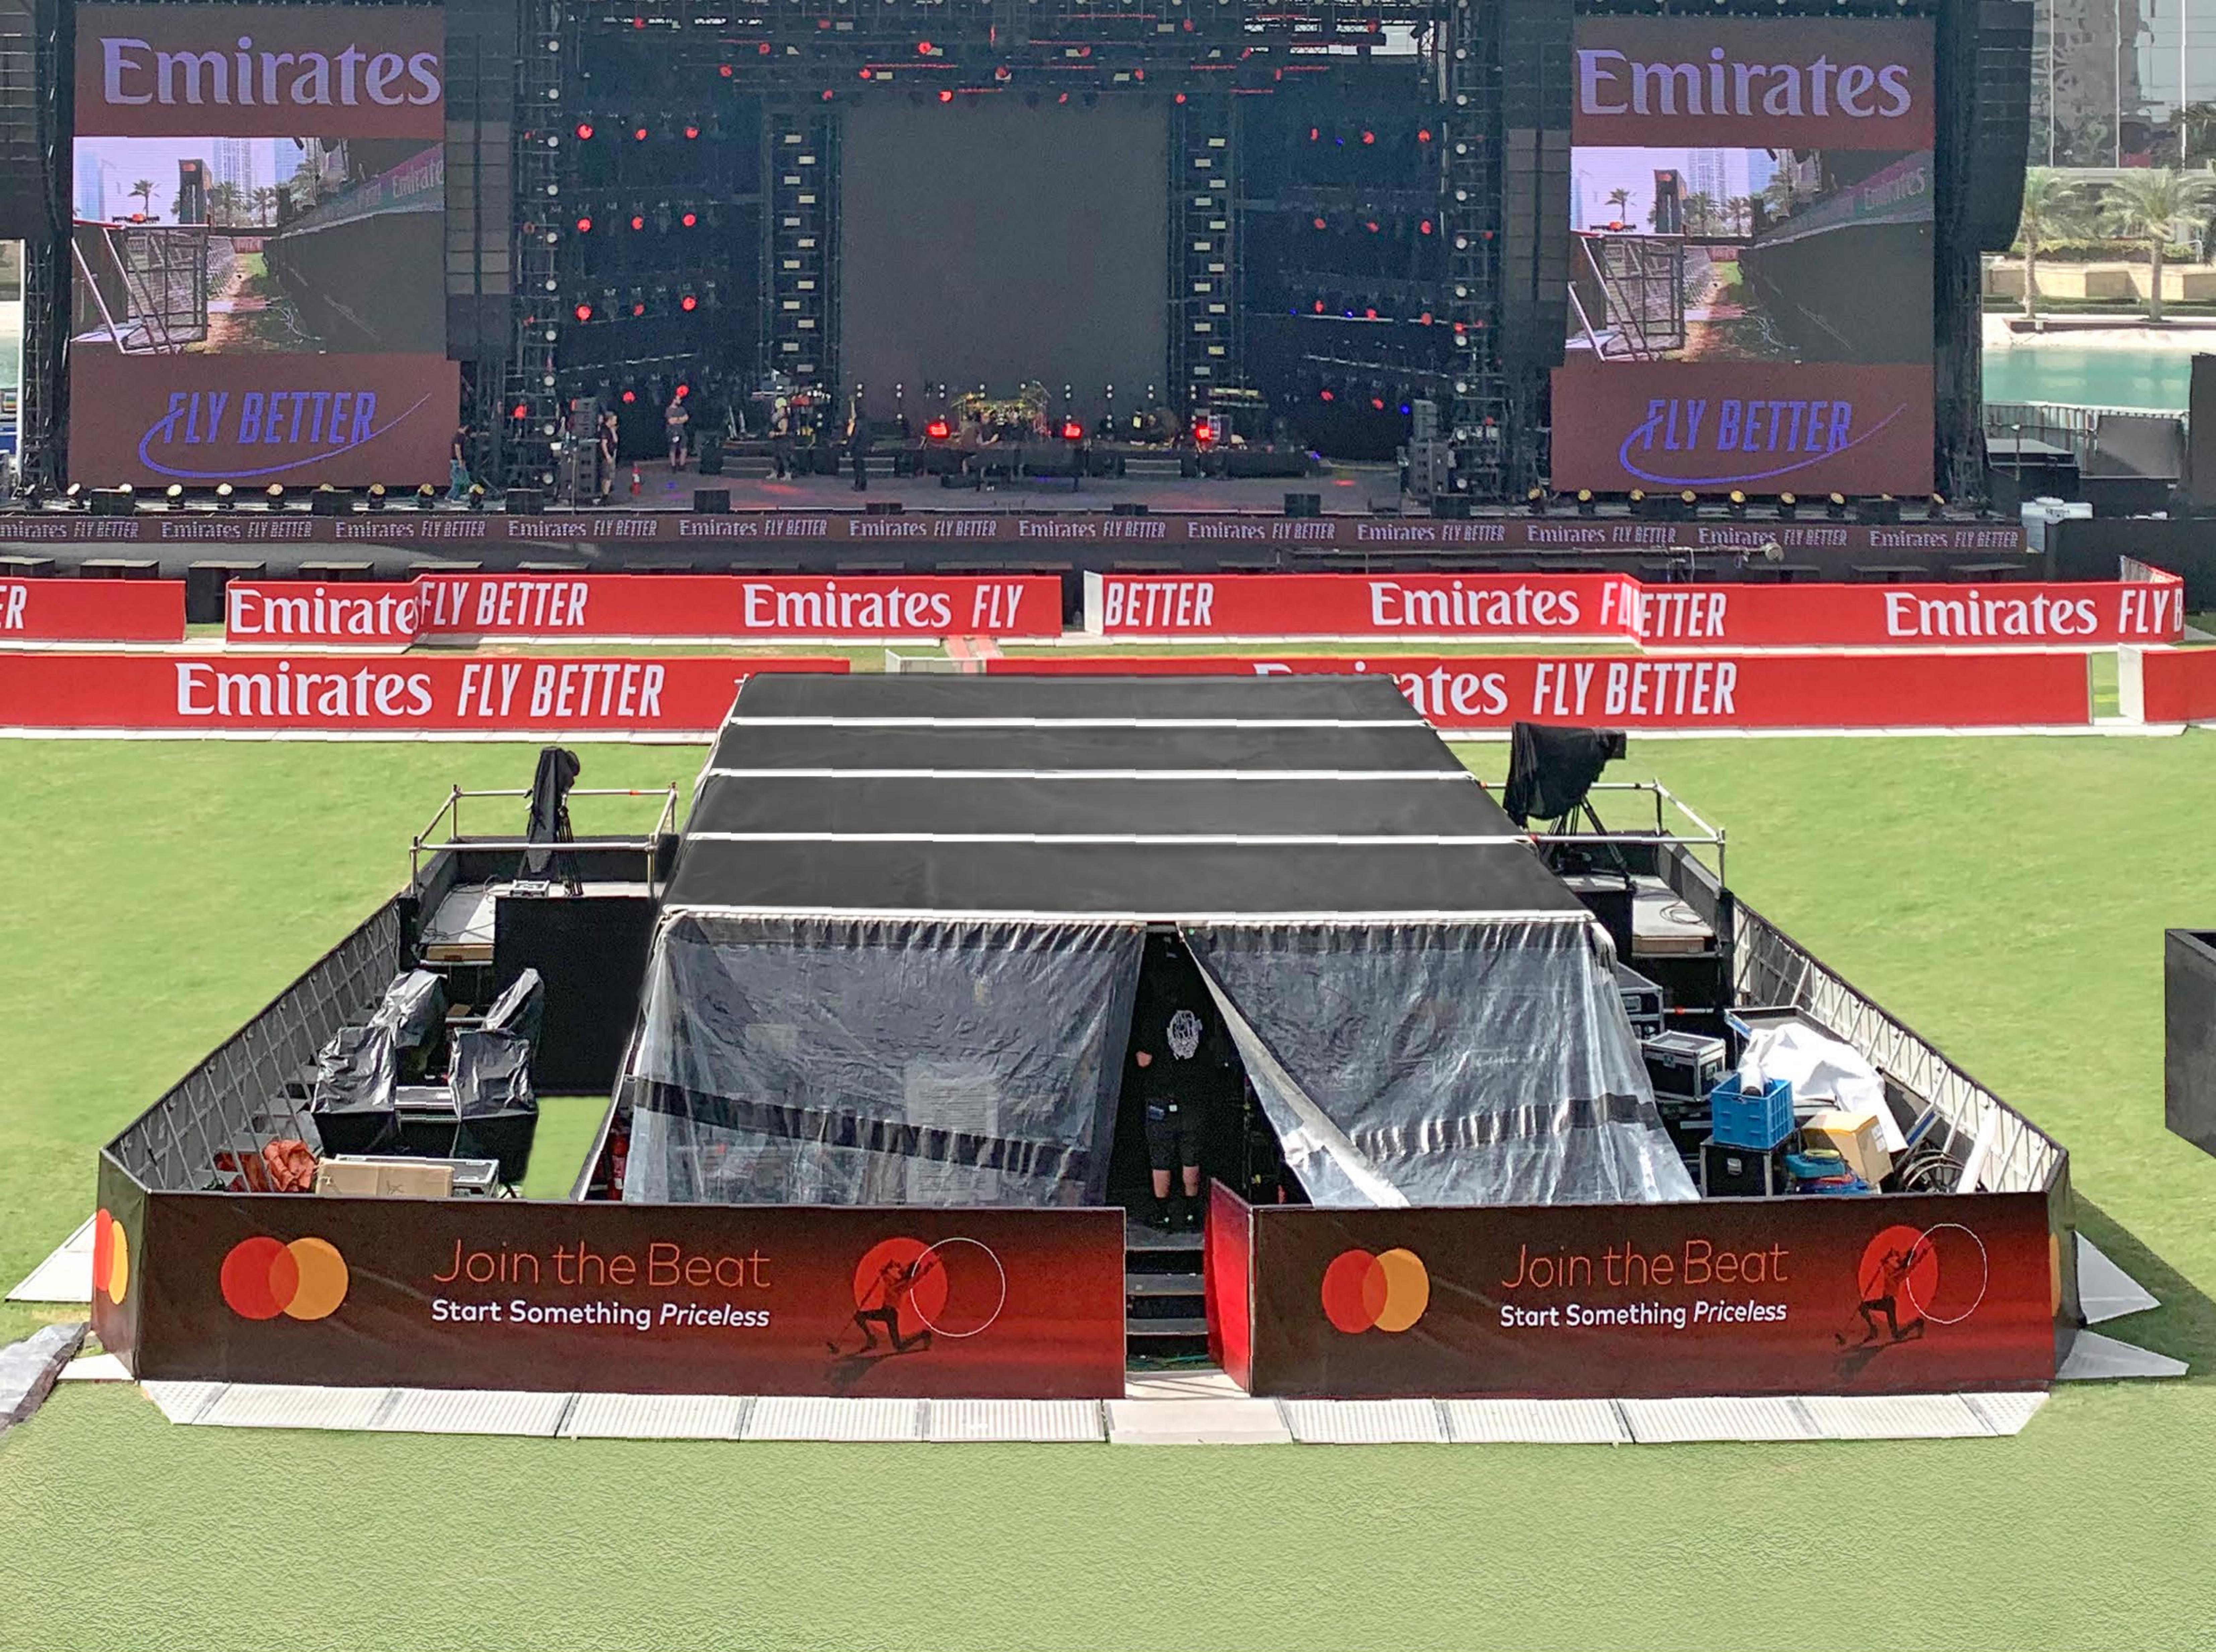

AES offer the steel Bojo barrier as an excellent solution to create bars

AES has snake runner sections that enables crew to feed cables through.
