The AES DJ Bandroof provides an elegant and creative solution for a wide range of event applications. The compact roof structure has been designed to offer overhead protection from the elements, reducing any sight-line obstacles between artist & audience whilst still offering maximum aesthetic impact.

Created with aesthetics and dramatic effect in mind, this modular system can be used as a roof to cover an mc, artist, band or DJ for any event where larger roof structures are not required or cannot be built.

The versatility of this product is vast and can be installed as a single unit or together with multiple units to create a larger covered stage area. The DJ Bandroof works well as a stand alone stage cover but can also be installed as part of a bigger staging set-up.

As with many of the AES modular products, this roof has been designed to allow our crew to install quickly, safely and with the option of minimal or no plant required.

The AES DJ Bandroof has been engineered to comply with all applicable EU and US standards regarding structural integrity.

DJ BANDROOF

COVERED AREA
approx. 6m depth
(unlimited width)

ROOF CLEARANCE HEIGHT
5m from stage deck

STAGE DECK HEIGHT
1.6m (minimum)
